

Project Brief

BINUS University International – Business Information System

Nathalia Devina

Subject:

- System Analysis and Design

Introduction

The project output should be made done in the period of the subject during even semester - all output and project presentation must be delivered during semester. Project output will be evaluated by group result and each member contribution, yet it is important to see that the project refer to several subject to ensure each subject is properly shown in the result and output. The group need to maintain consistency, connectivity and ensuring process integration in the related subject in the project output. Referring to the output, each group must have different company as reference.

Project Case Study / Company

Each group must select a real company as a study case for the solution. The selected company is expected a Small Medium Enterprise – and not a big company to maintain multiple business areas. The company has the potential to grow and run in the full Information System environment. The project will be prioritized to support the company to implement new system

Project Output

The project output given here as the main guidelines; each group can put some additional output if needed.

Project output should be ready at the end of semester period (Even 2025 – 2026). Project output will be evaluated by group result and each member's contribution. A maximum of 4 members in a group, students can choose their own group member, and report back to the lecturers.

A. General Output

1. Overview of the company
2. Product and services
3. Data collection reporting and evidence
4. Assumption in finalizing the solution

B.

1. Current business process
2. Current application / information system
3. Problem and finding in the current process
4. Future direction of company (can put industrial analysis to strengthen)
5. Solution
 - a. Business Process – Activity Diagram
 - b. Use Case diagram + Use case descriptions
 - c. Class Diagram – First Cut – Revised Class
 - d. Sequence Diagram
 - e. Deployment Diagram
 - f. User Interface (UI/UX)
 - g. Navigation Diagram / Storyboard
 - h. Prototype apps

Other diagram can be completed if you think necessary to explain the system (all in the list is a must)

You can use HICOLA in your design.

You should prepare presentation file and written project report. Due date: 17th June.
